Summary

Software developer and Computer Science student focused on building reliable **RESTful APIs** and data-driven systems. I enjoy designing **database schemas**, applying **SOLID** and layered architecture, and turning requirements into clean, maintainable implementations.

Recently, I built and deployed **Balegh**, a production-ready learning and exam-preparation platform using **ASP.NET Core**, **PostgreSQL**, **Redis**, **Angular**, and **AWS**, with a modular architecture and automated deployment infrastructure.

I also developed backend-heavy systems such as CinemaVerse and earlier desktop applications (DVLD, BBMS), strengthening my foundations in API design, databases, business logic, and system architecture.

Education

MET Academy, Mansoura, Egypt

Bachelor of Science in Computer Science (In Progress)

Expected Graduation: 2027

- Relevant Coursework: Algorithms, Data Structures, Object-Oriented Programming (OOP), Database
- Extracurricular: I share knowledge with peers through study groups, explain programming concepts on YouTube, and believe in learning and growing together.

Experience

.NET Full Stack Web Developer - Intern, Digital Egypt Pioneers Initiative (DEPI) – Oct 2024 – May 2025
Egypt (Hybrid)

- Completed a 6-month intensive program in full-stack development using **ASP.NET Core**, **Web API**, **EF Core**, and **SQL Server**.
- Contributed to multiple projects including a graduation-level event management platform with authentication and role-based access.
- Strengthened teamwork and communication through team-based delivery and code collaboration on Git/GitHub.
- Earned the Full Stack .NET Web Developer Certificate from MCIT (Egypt).

Full Stack Web Developer - Intern, Mansoura University (DTC) – El Mansoura, Jun 2024 – Oct 2024
Egypt (Hybrid)

- Built CRUD modules and RESTful APIs using **Laravel** and **MySQL**.
- Practiced MVC structure, validation, and front-end (React)/back-end integration workflows.

Projects

Top 4 Projects – More on [Portfolio](#)

Balegh LMS – Learning & Exam Preparation Platform

[Live Production](#)

- Built and deployed a production-ready Arabic-first learning platform for courses, quizzes, exam preparation, progress tracking, administration, and role-based access.
- Designed the backend as a **Modular Monolith** using **ASP.NET Core**, **EF Core**, **PostgreSQL**, **ASP.NET Core Identity**, **Redis**, and API rate limiting.
- Developed the frontend with **Angular**, **TypeScript**, **SCSS**, server-side rendering (SSR), hydration, and generated API clients for backend/frontend contract consistency.

- Automated production deployment on AWS EC2 using **Docker Compose**, **Nginx**, and **Ansible**, with media storage on **Amazon S3**.
- Technologies: **ASP.NET Core**, **EF Core**, **PostgreSQL**, **Redis**, **Angular**, **TypeScript**, Docker, AWS EC2/S3, Nginx, Ansible.

CinemaVerse – Cinema Ticket Booking Platform

[Github Link](#)

- Developed a scalable backend for a cinema booking platform featuring secure role-based **JWT** authentication and **Rate Limiting** protection.
- Integrated **Stripe** payment processing and automated background workflows using **Hangfire** for recurring jobs and notifications.
- Applied **3 Tier Architecture** with Repository & Unit of Work patterns, incorporating In-Memory Caching and structured logging.
- Technologies: **ASP.NET Core Web API (.NET 9)**, **EF Core 9**, **SQL Server**, **JWT**, **Stripe**, **Hangfire**, **Serilog**, **MailKit**.

EventHub – Event Booking & Management Platform

[Github Link](#)

- Designed and implemented robust RESTful APIs and backend infrastructure for an event booking platform handling reservations, role-based authorization, and QR verification.
- Collaborated within a team environment using Git/GitHub workflows, focusing heavily on core business logic and database integration.
- Ensured high performance and maintainability by applying layered architecture principles and clean code structures.
- Technologies: **ASP.NET Core Web API**, **EF Core**, **SQL Server**, **JWT**, **Swagger**, **HTML**, **CSS**, **JavaScript**, **Bootstrap**.

Blood Bank Management System (BBMS)

[Github Link](#)

- Built a desktop application for managing donors, patients, blood inventory, and transfusion workflows with a focus on data accuracy and operational efficiency.
- Implemented business workflows and reporting features while maintaining clear separation between application layers and database operations.
- Strengthened understanding of database design, validation, and system architecture through building a complete real-world management system.
- Technologies: **C#**, **.NET Framework**, **SQL Server**, **ADO.NET**, **Guna UI**.

Technologies

Backend: C#, ASP.NET Core, Web API, Entity Framework Core, LINQ, JWT, ASP.NET Core Identity, RESTful APIs, Swagger, SignalR, Rate Limiting, Modular Monolith

Database & Caching: SQL Server, PostgreSQL, Redis, Relational Design, ERD, EF, ADO.NET

DevOps & Cloud: Git/GitHub, Docker, Docker Compose, AWS EC2, Amazon S3, Nginx, Ansible, Postman

Frontend: HTML, CSS, JavaScript, TypeScript, Angular, SCSS, Bootstrap, SSR & Hydration

Other: Windows Forms, ADO.NET, Guna UI2, Python (Pyrogram / Telegram Bots), Software development lifecycle

Soft Skills

Soft Skills: Problem Solving, Teamwork, Communication, Leadership, Time Management
